

VISARO FE DEVELOPER TEST

Experience Level : Intermediate

Technical tools required:

- Typescript
- NextJs
- Redux Toolkit
- Tailwind CSS
- AntDesign

1. Build out an ECommerce app with the above mentioned tools, using the link below as a guide to the page's layout (use of Ant Design isn't compulsory):
<https://bit.ly/visaro-fe>
2. As shown in the above URL, the landing page should list available products with details, and support dynamic filtering based on categories displayed at top level.
3. Your app should support cart functionality; a separate cart page where items in cart are displayed and can be increased / decreased in quantity. The cart page should also show a summary of all products with total cost, as well as a non-functional "Checkout" button.
4. Bonus points for integrating any free open source Ecommerce APIs
5. On completion, attach the hosted app's url along with a repository link, and send to tosin@visaro.ng. This should be submitted on or before 5p.m on Monday, May 6th, 2024.
